### What's New In Floatsync?

Floatsync is a small, easy to use, Java based application specially designed to help you sync iTunes music with Android phones and other devices that support a "mass storage device" mode. You just select the files to use, and let Floatsynctake care of the rest. So, if your having problems synchronizing your iTunes library give this app a try and see how it goes. Upside: Low-energy consumption Notifies you when changes occur in iTunes Can be controlled from your Android device Can be started manually or automatically at boot Downside: Low RAM footprint Verdict: A very simple application that does exactly what it says on the tin. While not the first of its kind, it is a highly effective tool to sync your iTunes media across to a variety of different Android devices. At the price of just a few bucks, it's hard not to recommend this application. Floatsync is a simple software utility that enables you to synchronize your music and other content between an iPhone and an Android phone. It's a good idea to be able to synchronize your phone's media with your other devices, since you could get into trouble if your device is lost or stolen. If you own a cell phone and an iPad, iPod or similar device, you can use Floatsync to transfer music and other files from one device to the other. The only thing you'll need to do is connect the two devices to your computer and launch the software. The interface is extremely intuitive and even though Floatsync is Windows only, you should be able to navigate the interface without a problem. The application is very efficient and, while it is not a full-featured media player, it supports transferring both audio and video files. All you need to do is select a folder on your computer where you'd like the media to be stored, and then select the folder you want to copy the files from your device to. After that, you can select the files you want to copy. This is a great app that will keep your content safe and it's a perfect complement to your cell phone. If you're looking for an easy and efficient way to transfer media between a Windows PC and an Android device, then you should definitely download Floatsync. K-Meleon is a Java-based Web browser. It has many features such as multi-tab browsing, desktop mode, multiple window support, a pop-up blocker, and the ability to download web pages. It is the best browser to use on your Android phone and tablet because it is powerful and much faster than other browsers. Here's a basic guide to using K-Meleon as a Web browser on your Android device
