NetPaylas is a reliable and easy to use application designed to help you create a small wireless network and enable your friends to access the Internet. You need to connect the proper device or a computer to an Internet adapter, then transform your machine into an Internet provider. Create protected networks NetPaylas is a suitable solution for creating a local network, using a proper device or machine and establishing the connection to Internet adapters. You may create a temporary network, that can serve a short-term purpose, or even set a permanent Internet connection. Moreover, you can modify the IP settings, depending on the Internet adapter sources. While the software recommends that you do not change the IP numbers, you may modify them, when required. Additionally you may protect your network with a password, that you can share only with trusted users and change regularly. Any new password can be changed in a history log area. Also, you may enter a custom password, or let the software generate a random alpha-numeric sequence. Each pass-phrase requires a minimum number of characters, and, optionally, different type of symbols. Required Internet adapters You may convert your machine to a wireless router, by establishing a connection to an Internet adapter. Once such a connection is stable your machine can transmit the signal through wireless means, to other devices or machines. Simply choose a name for your network, a password, for protection, and click Start to enable sharing the Internet connection. A display box, in the right upper corner of NetPaylas's window notifies you which devices are connected to your network. Thus you can monitor the Internet traffic and all the participants. Moreover, you can modify the IP settings, depending on the Internet adapter sources. While the software recommends that you do not change the IP numbers, you may modify them, when required. Conclusion You can easily create a wireless network that your friends can connect to, with NetPaylas. The software is lightweight and easy to use, since it allows you to turn your computer to a wireless router. Setting up a local network is made easy, because you can connect your computer to an Internet adapter, then start your own wireless network and allow your friends to access the Web. 2 comments The king of my favorite programs is Chrome. I used to use firefox, but it is very slow and the interface is not as easy as chrome. I'm a wimmper myself, so I

100% Satisfaction Guarantee. The Wizard was able to successfully create a wireless network and even added the computers and Internet adapters to the network. That is something I think is un-matched by any other app I have tried. You Can Use The Wizard To Create Internet Access For Multiple PCs Connected To The Same Network. This is a great option if you want to create a shortcut to the Internet, or a network that your friends can access. It also works for devices connected to a router. The Wizard Is Flexible - You Can Set Up a Nested NetWare Network - Up to N Levels! I Love the flexibility the Wizard gives me, because I can create the network I want and maintain it the way I need. The Wizard Has Some Easy-To-Use Options. After I created a network, all I had to do was choose whether or not I wanted to make the network a "trusted" network. After that, it really was a cinch to make my network a true "trusted network". This Wizard is probably the easiest Wizard that I have ever tried to use. The Wizard Has Some Detailed Information: The Wizard gave me a lot of detailed information, which made finding my way around the software a lot easier. The Wizard Has A Fairly User-Friendly Interface. The Wizard's interface is quite easy to navigate and very user friendly. You will have no problem creating a network without reading a manual.
