This tutorial is available for download here. Step 2 In this tutorial series we will be building a simple grille mold. The purpose of this is to show you how to use the drawing commands and the various tools available to you. Step 3 Find and download the parts list below. This file is available for download here. Part List Download Use the Free Tutorial to Learn the Basics of AutoCAD In this tutorial we will explore the AutoCAD programming environment in the drawing area. We will also go over basic principles of AutoCAD drafting. Find the Free Tutorial in My Resources How to Make a Carved Grille Mold in AutoCAD It will be helpful to have AutoCAD before we begin this tutorial. You will need to download a recent version of AutoCAD from the Autodesk website. Autodesk recommends that you have the current, latest version of AutoCAD installed on your computer for optimum performance. If you do not currently have AutoCAD installed, you can download a free 30-day trial version. When you have AutoCAD installed, you will need to register to download the parts list file. After you have registered, you will be able to download the parts list file from the Autodesk Parts List Download site. In AutoCAD, open the Computer Management window by clicking the Start button, and then click the Programs tab. Select Autodesk AutoCAD on the left side of the window. Click the Action button and then click the Remove program entry. Confirm the removal and restart the computer. Storage formats Unlike most 2D CAD programs (including Solidworks, Aliasworks, and some versions of Autodesk Inventor and Solid Edge), AutoCAD is capable of storing multidimensional objects in an editable way. This includes drawings, dimensions, text, multivariate parametric surfaces, and drawings using multiple profiles. The last is implemented as a 3D drawing with multiple "extents". The extents are defined by a rectangle and a series of points and there is a convention for defining an orientation (x, y, or z). This is particularly useful for creating freeform parametric designs. In addition, the extents are synchronized with the user's coordinate system, and they can be associated with a CNC machine (manually or via a driver). The z-extent is mainly used for multilevel modeling in the front end, but can also be used to store features in a multisegmented assembly. The ability to automatically create shapes is a key feature for 3D drafting. The command is used to create a closed polygon or face which can be edited (in most cases) in the same way as any polyline in AutoCAD. To create a spline surface, select either the "spline" command from the "Surface" menu or the "Create surface from spline" command from the "Extents" menu. This command generates a spline, which can be edited like any polyline. This spline is called a base spline and any other spline generated from it is called a surface. The surface can be manipulated as a spline surface, although it cannot be edited in the same way as a polyline. If a surface is open when it is created, it will stay open when it is edited. To make a template, select either the "template" command from the "Menu Tool Bar/Extents" menu or the "Create a template from extents" command from the "Extents" menu. The template can then be edited in the same way as a normal drawing. The "Create a template from extents" command can be used to create a template in which multiple drawings can be inserted. Another option for creating closed surfaces is to use a "template surface". Select "Create surface from template" from the "Extents" menu and select either the "template surface" command from the "Menu Tool Bar/Extents" menu or the "Create a template from

Add real-time highlights for imported PDF comments to your drawings, regardless of where the comment is on the page. You can add markings to your drawings in places where you need to, such as in tables, layers, or blocks. (video: 1:23 min.) Use a drawing's object library to create generic, non-editable components. This can be used for such things as package siding, laminated cover panels, or other components that are consistent in their appearance.
