The aim of this study was to determine the effect of over-expression of the gene encoding growth differentiation factor 5 (GDF5) on meat quality in chickens. The growth differentiation factor 5 cDNA was cloned into the pcDNA6 vector to produce the recombinant pcDNA6-GDF5 plasmid. The pcDNA6-GDF5 plasmid was then cotransfected with the pcDNA3.1-Green fluorescent protein (GFP) plasmid into fertilized chicken eggs using Lipofectamine. The GFP positive transfected embryos were harvested on day 14 of incubation and then inoculated into 6-week-old commercial broilers. Meat quality parameters were then determined. From the second day, the growth rate of broilers expressing the pcDNA6-GDF5 plasmid was significantly slower than that of control broilers. The broilers expressing the pcDNA6-GDF5 plasmid had significantly lower breast muscle thicknesses and crude protein levels than control broilers on day 42. The broilers expressing the pcDNA6-GDF5 plasmid also
