The Free City Bus Feature is only available for the ATS version for Windows (.Net Framework 4.0). If you already own the Original Atmosphere Transport Simulation (ATS), here's an extension for a brand new game Add-On: City Bus Simulator (Windows and Mac). After the passengers have sat down, the bus can accelerate to up to 80km/h. If the traffic is too heavy, the bus has to activate the Brake&Einstellungsmodus (the Brake&Einstellungsmodus offers more details). The bus can pass the front bus shelter. The city is a perfect representation for the Greater Region Hagen-Wuppertal: You can spend a lot of time in the bus, but all passengers and drivers live. Bus stop, rails and road signs are coming out of the ground (the existing world is still complete). First, break the brown colored road surface (masked) and move your bus around. The bus will become invisible. In the schematic view you can see how fast you drive: When we load the original terrain, you can't see the bus, but when we replace the terrain by skybox's, the bus appears. The masses (heavy objects in the bus) are in the foreground: Please exit the vehicle and move around, there are 16 additional objects which can be controlled. Let's try it again: Please exit the vehicle and move around, there are 16 additional objects which can be controlled. Let's try it again: To get inside the bus, you have to click on the trunk. OK, that was easy. Important: Activate the Xbox Gamepad, because the Sim Mode gives additional information. Nice: There's a train in the foreground; please enter it and drive inside. In the traffic simulation, your own bus is driving, but it passes him. How? Because we are just simulating, because that's not the real world. Of course this will be a possibility in the real life, as well. This

Chicory: A Colorful Tale is a contemplative point-and-click adventure game that tells a story about a young man and a young woman growing apart, and the effect it has on the journey of their lives. The game explores themes of loss, and the living that we do to survive. The music of the game reflects the color palette of the world through its richness and complexity. Each track can be unlocked as you play, and the game play fully supports music playback, allowing players to completely immerse themselves in the game story while playing music. This soundtrack combines a range of genres from peaceful piano pieces to emotional rock to electronic bombast. Additional Assets: The second half of the album contains an alternate version of the game soundtrack, containing the music between floors 2 and 3. Donation: Much of the sound design and other in-game art elements for Chicory were done as a challenge project in the Game Design and Composition MSc degree at Bangor University. During the course of the degree the team developed a prototype of the game: After the degree ended the team continued to work on the game, adding details like a full story mode, a craftable sword and the ability to speak/sing while playing in various ways. The game was also featured at Rezzed in 2013 - Rezzed is the largest free retro gaming show in the world, dedicated to all things retro. It was started as a print magazine way back in 1996 - Steam page: Facebook page: More info here: Twitter: Tumblr: Instagram: Behance: Sound design:
