Adverse events and medical device audits: an efficient and economical approach. The use of medical devices in surgery is becoming increasingly common. Such devices include those used for intravenous infusion, haemodialysis, cardiopulmonary bypass and cardiac surgery. The increasing use of these devices has led to greater reliance upon their quality, safety and efficacy. Two approaches exist for the analysis of the use of these devices: a retrospective audit and a prospective clinical trial. The former is more economical but the latter may provide greater insight into the problem. A prospective approach may identify new safety hazards, whereas a retrospective approach may detect risks that have already been recognised but which have not been measured. The future of healthcare, including the use of medical devices, is defined not by comparative studies but by improved understanding of the prevalence of problems and the identification of new technology. Q: In C#, how can I read and display text from a file as it is changed? I want to have a text file that is being edited on the fly. I don't want to refresh the entire page, I just want to be able to update the text file and have the text appear in a popup window without refreshing the entire
