It's about time we have video editing software from iMovie, Final Cut, Movie Maker, and Windows Movie Maker competing with Apple's Final Cut Pro and iMovie. Sound as though it's a smart move by Apple to team up with Adobe here. If not though, this wasn't really needed as an iPad Pro feature. Whether or not you download it though, if you have an iPad Pro, you can multitask between apps. It's a very simple concept. Instead of having apps open all side by side on the iPad Pro dock, you can run one and display in its window. This would work very well with the new Lightroom and Photoshop, as well as Final Cut and Apple Final Cut Pro. When the iPad Pro is folded and placed into its Pro or Pro Max enclosure, it's a bit more cramped and underpowered. If you want to run Final Cut Pro and Lightroom, you'll need to carry around the iPad Pro separately of course. Protecting battery life also becomes harder in this scenario. "...I can also say that this is the best editing and printing software I have used so far. I have tried both ink-jet and HP printers and the results are awesome with the software's native controls. I definitely recommend this software to anyone who wants the best printing and photo editing software out there."
– Fotowrapper.com "...Improved the processing engine... a new layer/duplicate/movement tab, and above all: a real time histogram."

"If you just upgraded to Photoshop CS5 and want to just play around with photo editing, you should now have a pretty good idea of what you are getting yourself into, and this looks like it is exactly what you should be looking for."

"Ok, I admit it, in my opinion the extension of the usability experience of the user to a whole new level."

"As usual, Adobe's clever implementation of every feature save for Apple's Cocoa was left untangled and cleanly implemented."

"When you get it working, it's a revelation, because it turns out the installation process was done

with a lot of care and attention to detail."

"...Having made the switch back to CS3, I can say with certanty that all my complaints about CS4's performance and extension have been sorted out."

"Regardless of your choice of program you should install the Lightroom.app update as soon as you can (I mean, I had to even though my review is already posted)."

"I haven't had a single issue with it, and it takes all my worries away. I love the way the app works."

"The big news is the update to CS5 where it is no longer necessary to install the library to get all the extension modules working, and a new application for the changes I love most."

"...whatever other advantages you think might be provided by Lightroom they pale in comparison to the experience of actually seeing - on a scale of zero to ten - how well my pictures and negatives look."

"I have used several different RAW converters before and after my switch to Adobe's software. After a year or two of fairly close experimental use I can say with the utmost confidence that Lightroom has a complete, well thought out, well implemented, methodical, and above all, fast workflow that far exceeds any other RAW converter I've tried."

"Lightroom displays and edits images much better than any other RAW converter I have ever used, and it does so in a way that is very intuitive and graceful."

"The better the product, the more it is deserved to have been given more than a 5."

"Let's face it, Lightroom is without a doubt the best editing and printing software on the market today. Once you download the application, you'll have nothing to worry about, and the experience of working with Lightroom is amazing. If I were to give Lightroom a ten rating from one to ten, it would have to be a ten."

"The update to CS5.1 has been a great one. I have been testing it for the last couple of weeks, and I love it."

"...I still don't think I could trade in any of my editing and printing tools, especially Lightroom.

Photoshop is a great tool to do a lot of great things with photos. This tool is perfect to sharpen the quality of your images, fix the color, add or remove pixels, crop images, and retouch photos. I hope that all the features that you want are available with Adobe Photoshop. If you have anything other than the features, then just comment below. And if you tell me how you love it then I will try to add more features in the future version. The new Adobe Photoshop has smart guides, which automatically place appropriate guidelines as you edit an image. You can even paste objects, like a text layer, on a new page, and Photoshop will smartly adjust your pasted object's position and size. Adobe has also extended the content-aware moving feature, which lets you easily move content and retouch at once. You can use the eyedropper tool to highlight an object in an image, and pick compatible objects in another image to replicate. This feature gives you real-time painting support and content-aware copy to move your photo. With this extended content-aware treatment you can easily blend one image with another, or filter out unwanted elements. Other new features include a new version of Photoshop's Content-Aware Auto-Align on face alignment, which quickly re-aligns faces so you can align faces to an image. While Adobe Photoshop CC 2019 provides the latest updates to features such as 3D, HDR and rendering, arguably the most impactful update comes in the form of a new AI-powered camera. The camera was developed in collaboration with experts in machine learning and deep-learning techniques. It is able to capture light effects, such as glare, highlights, and vignette. And the new HDR Pro technology automatically captures a sequence of six bracketed images of the same scene to produce a single 4K HDR image. Many photographers will already be familiar with the artistry of the iPhone and the camera on their smartphones, of course, but this makes Photoshop the ultimate camera and lighting tool. It really is super clever stuff.
