It is also known as the visual schedule, because work is modeled as a graph, blocks are "visualized" by means of a "card" system. Kanban can be used with most of the other management methods (including Jidoka), although it is more popular and recommended as an independent system. It is primarily used to improve coordination, communication and efficiency and reduce cycle time in order to meet demand. Kanban was initially used in the manufacturing industry, but was later adopted by the software development industry, such as in agile software development. The name of the system comes from the practice of putting up "Kanban" boards in offices, which worked like boards on which tasks could be placed. This video is targeted to give a detailed introduction to Kanban. 5:17 Kanban Chords - Kalishnikov - Piano Cover Kanban Chords - Kalishnikov - Piano Cover Kanban Chords - Kalishnikov - Piano Cover
