What Type of Software Workflow Do You Use: For personal projects, photo editing is often done on your computer or with a compact camera. You might print the results or send them to friends and family. **What It Does:** Using the Camera Smart Brush, Content Aware Fill or the Content Aware Patch features, Photoshop Photo enables you to fill an image with custom patterns, textures, and images (including your own) that match the content of the image itself. The Patch function uses machine learning to recognize and replicate any specific elements in other images, like a specific ornament on a Christmas tree, and blends that into the photo. The Content Aware Fill function can detect and fill in subtle shadows and highlights on any subjects. Adobe Photoshop doesn't teach you how to use the features of this application.
