If you select the regular Edit mode in Lightroom and open a photo, you'll see four panels in the bottom of the screen. Within each panel you'll find a toolbar containing buttons to adjust the brightness of the photo, create an artistic painting type effect, adjust the exposure, crop the photo, add text, and apply one of 51 basic filters. You can also adjust your white balance. These filters are only available on the desktop version of Lightroom, and only for the most part work as advertised. This automatically sets it to the most optimal settings and it will then print the images out. If you're using the mobile version, you can also export your photos as JPEGs that you can send wherever you want. **Stereoscopy** – Not a new feature, but the gains in the field of Stereoscopy seem to be with the rise of VR headsets. And at the same time consumers have shown a lot of interest in depth images.
